

Acute Email IDs Production Engine

USER MANUAL

© All rights reserved 2012-2017 WWW.SAGaweBS.COM

This user manual will help you to understand how this software works and how you can generate unlimited email addresses list from it to promote your email offers.

As you know that most of the people create their email addresses using their names. These are the examples of email addresses in different countries:

In US

james_brown@yahoo.com

john.smith@yahoo.com

In UK

aaron_jackson@yahoo.com

mac_martinez@yahoo.com

In Canada

jessica_martin@yahoo.com

kevin_hill@yahoo.com

In India

amit_gupta@yahoo.com

sonia_khurana@yahoo.com

Acute Email IDs Production Engine works on the same concept. Today, it's considered as the **most powerful tool** for internet marketers. Using this software, you can reach thousands of customers, referrals and other people who might be interested in your product, service or other CPA offers. You can target any country, any niche and any keyword.

Using Acute Email IDs Production Engine

As soon as the software is installed, goto your start menu and double click on software icon. This is the very first window you will see after the program loads. Simply click '**Start Engine Now**' button to start the program.

After clicking '**Start Engine Now**' button you'll be on the first step of generating email lists.

The screenshot shows the 'Acute Email IDs Production Engine' software interface. At the top, there is a navigation bar with buttons: 'Start From Here', 'Import Names', 'Choose Email Service', 'Select Keywords', 'Generate Email List', and 'About'. The main content area is titled 'Step 1 - Import Names' and contains the following text: 'Names are required to generate email lists because most of the people create their email addresses using their names. Thousands of names are available in the database of this software. Simply click 'Show Names Database' button to see files containing first names and surnames of people. You can import first names only, surnames only or even both.'

Below the text, there are two file selection fields. The first is labeled 'File name which contains first names of people:' and has a text box containing 'usa-firstnames.txt' and a browse button (...). The second is labeled 'File name which contains surnames of people:' and has a text box containing 'usa-surnames.txt' and a browse button (...). Between these fields is a 'Separator (optional):' field with an empty text box.

At the bottom of the main content area, there are two buttons: 'Show Names Database' and 'Import Names & Go To Next Step >'. The 'Import Names & Go To Next Step >' button is highlighted with a red rectangle.

At the very bottom of the interface, there is a row of five buttons: 'Need Help? Check Knowledgebase', 'Get Super Tips', 'View Email Lists', 'Remove Email Lists', and 'Close The Engine!'.

Here you can import names of the people of the country you want to target. For example, if you want to target USA market then you'll need email addresses of people of USA. Just select the files which contain USA people names (firstnames or surnames).

Note: You can choose to import firstnames only, surnames only or even both to combine them.

Use of Separator: The use of separator is completely optional! As you know, while creating email addresses you can enter separator to separate your firstname and surname. For example: *james_brown12569@rediffmail.com* contains _ (underscore) as a separator. The most common separators are .(dot) and _(underscore). You can either choose a separator or simply leave this field blank. Don't use a character as a separator which is not allowed in email addresses. For example: +, *, or a \$ sign.

Not only this, you shouldn't use a separator which's not allowed by the email service provider (like gmail.com) whose email addresses list you want to generate. For example, if you want to generate a list of *gmail.com* email addresses then don't use _ (underscore) as a separator because gmail.com doesn't allow _ (underscore) in it's email addresses.

Never use a separator when you're importing only firstnames or only surnames. Separator should be used only when you're importing both (even then it's optional!)

Software database contains thousands of names of people from USA, UK, Canada, Australia, Spain, France, India, China and many other countries. Just click '**Show Names Database**' button to see files available of different countries people names. Select file of your choice, choose (or not) a separator and click '**Import Names & Go To Next Step**' button.

After clicking **'Import Names & Go To Next Step'** button you'll be on Step 2.

Enter email service provider name whose email addresses list you want to generate (like gmail.com, yahoo.com or hotmail.com) and then click **'Next'** button.

The screenshot shows the 'Acute Email IDs Production Engine (premium edition)' interface. At the top, there is a navigation bar with buttons: 'Start From Here', 'Import Names', 'Choose Email Service', 'Select Keywords', 'Generate Email List', and 'About'. The main content area is titled 'Step 2 - Choose Email Service'. Below the title, there is a text box with instructions: 'Enter the name of email service whose email addresses list you want to generate. If you're interested in gmail email addresses then enter gmail.com, if you're interested in yahoo email addresses then enter yahoo.com and so on...'. Below this text box, there is a label 'Email Service Name:' followed by a text input field containing 'gmail.com'. Below the input field, there are two buttons: 'Back' and 'Next'. The 'Next' button is highlighted with a red border. At the bottom of the interface, there is a row of five buttons: 'Need Help? Check Knowledgebase', 'Get Super Tips', 'View Email Lists', 'Remove Email Lists', and 'Close The Engine!'.

Now, you're on Step 3. Here you can enter any keywords (according to the niche) you want to target.

The screenshot shows the 'Acute Email IDs Production Engine (premium edition)' interface. At the top, there is a navigation bar with buttons: 'Start From Here', 'Import Names', 'Choose Email Service', 'Select Keywords', 'Generate Email List', and 'About'. The main content area is titled 'Step - 3 - Keyword (Optional)'. Below the title, there is a text box with instructions: 'Some people use a lot of other words with their names and create email addresses like prince.usa@gmail.com, smart_prince@yahoo.com, seo.prince@gmail.com, prince.1980@yahoo.com, prince_on_twitter@yahoo.com etc. You can also enter any keywords below and those will be used as prefix or suffix with names while generating email lists. Using keywords like 'poker' or 'poker_' will generate emails like pokerprince@yahoo.com or poker_prince@yahoo.com respectively.' Below this text box, there are two labels with corresponding text input fields: 'Use this keyword before every name in emails (optional):' and 'Use this keyword after every name in emails (optional):'. Below the input fields, there are two buttons: 'Back' and 'Next'. The 'Next' button is highlighted with a red border. At the bottom of the interface, there is a row of five buttons: 'Need Help? Check Knowledgebase', 'Get Super Tips', 'View Email Lists', 'Remove Email Lists', and 'Close The Engine!'.

A lot of people use their favourite keywords in their email addresses. People use the words like 'mr', 'miss', 'mr.' 'smart', 'cute', 'sharp' etc. or something related to their niche. For example, if someone is a fan of 'poker' then his email address would be like prince.pokerfan@gmail.com or prince_pokerfan@yahoo.com.

Examples of email addresses with keywords:

- o prince_on_twitter@yahoo.com,
- o prince.cute@gmail.com
- o sharpprince@live.com
- o prince.SEOexpert@gmail.com,
- o smartprince@gmail.com,
- o mr.prince@gmail.com &
- o prince_moviefreak@yahoo.com etc.

You can use .(dot) or _(underscore) too with your keywords, but again make sure your email service provider whose email lists you want to generate allows those characters in its email addresses. For example, you shouldn't use _(underscore) with keywords if you're going to generate gmail.com email addresses because gmail doesn't allow _(underscore) in email address. So an email address like *prince_pokerfan@gmail.com* would not be a real email address (invalid) but on the other hand *prince.pokerfan@gmail.com* would be a real email address (valid).

So enter your in the appropriate field (to prefix or suffix with names) and press '**Next**' button.

This is the final step of generating email lists. Enter a file name to generate and save email list.

Some people do insert a random number in their email addresses like *prince.poker478@gmail.com* so if you're interested in generating email lists which should've a random number at the end of name in each email addresses, then simply tick the option shown below and click '**Generate Email List**' button.

The screenshot shows the 'Acute Email IDs Production Engine' interface. At the top, there are navigation tabs: 'Start From Here', 'Import Names', 'Choose Email Service', 'Select Keywords', 'Generate Email List', and 'About'. The current step is 'Step - 4 - Generate Email List!'. Below this, there are settings for 'Names in use' (Both (first & surnames)), 'Separator in use' (None), and 'Email service provider name' (gmail.com). A preview shows 'Generated email addresses will look like: firstnamesurnames@gmail.com'. A red arrow points to a checkbox option: 'Every email address should have a random number at the end of the name (example: firstnames.surnames784@gmail.com)'. To the right, there is a text box for 'Generate and save email list to:' containing 'Email-Lists-1.txt'. Below this are 'Back' and 'Generate Emails List' buttons. At the bottom, there are several utility buttons: 'Need Help? Check Knowledgebase', 'Get Super Tips', 'View Email Lists', 'Remove Email Lists', and 'Close The Engine!'.

After you click 'Generate Email List' button, software will tell you the number of email addresses generated & saved in the email lists folder.

Important: As soon as an email list is generated, the software automatically randomize names in the names database file, so you can generate newer email lists from the same file by clicking 'Generate Email List' button again. This option is useful only when you are combining firstnames and surnames.

Now click '**View Email Lists**' button to see saved email list.

That's it! Your email list is ready for use!

How to generate even more email addresses list?

To generate more email addresses list, you can:

- Click 'Generate Email List' button again (only if you're combining firstnames and surnames).
- Import names from a different file.
- Use only firstnames or only surnames.
- Use a different email service provider name.
- Use different keywords
- Check/Uncheck 'Random Number' option on 'Generate Email List' tab.

This software has unlimited potential to generate email lists and you can exploit it upto the maximum extent.

As you know that these are only supposed email addresses & not all of them would be real but you can generate **unlimited email lists** using this software and there're thousands of ways to generate email lists with this software and there's simply **no limit!**

You can generate and save a HUGE database of email addresses and it's guaranteed that a lot of them would be REAL EMAIL ADDRESSES!

Sending Emails!

There are lot of softwares available on the internet using which you can send *thousands of emails at once*. Few of them are free and few are paid ones. Some of them are: Vallen Emailer, VodaMail Bulk Mail Sender, FastMail Sender, Outlook Express and Thunderbird. There is a lot of information available on the internet about sending bulk mails.

Search on Google for keywords like 'bulk email sender', 'how to send bulk emails', 'bulk email sending software', 'mass email sender', 'how to send bulk emails' etc. to get more information about sending bulk emails.

While sending bulk emails, please consider CAN SPAM Act guidelines. These guidelines are really simply and you won't be accused of sending spam mails. [Click here](#) to read these guidelines. Daily thousands of companies and internet marketers send promotional emails LEGALLY by following these simple CAN-SPAM Act guidelines.

Let's calculate your income

Assume that you generate only 2,50,000 Email addresses using this product. It will take only few minutes for generating 2,50,000 email addresses.

You send mails		250000
May bounce back or email addresses may not exist	60% (Maximum Taken)	150000
Email Actually Delivered to	40%	100000
People who don't take any action	90% (Maximum Taken)	90000
People who will take action	10% (Minimum Taken)	10000
People who May NOT buy your product/service even after visiting your website or your CPA link.	90% (Maximum Taken)	9000
People who will buy or complete your offer		1000
Your Conversion Rate	$(1000/250000)*100$	0.4%

**We are taking conversion rate only 0.4% (Minimum)
(Standard conv. rate is 4-5%)**

So, after taking All the limitations in consideration up to the Maximum Possible Extent, your income should be:

If your product price or offer commission is	No. of Buyers	Your Income
\$2.00	1000	\$2000
\$5.00	1000	\$5000
\$7.00	1000	\$7000
\$17.00	1000	\$17000
\$27.00	1000	\$27000

*** The best thing is that you can generate newer email lists every day**

- What if more than 10% customers react to your offer?
- What if you get more than 0.4% conversion rate?
- What if you send email to 2,50,000 people everyday?
